

Aufgabe 13.73

Sei $a \neq 0$. Berechnen Sie den Inhalt der von den Kurven $y = x^5 e^{ax^6}$, $y = 0$, $x = -1$ und $x = 1$ begrenzten Fläche!

Lösung:

Bild für $a = \frac{1}{2}$:

$$f(x) = x^5 e^{ax^6} \begin{cases} > 0, & x > 0 \\ < 0, & x < 0 \end{cases}$$

$$F = - \int_{-1}^0 x^5 e^{ax^6} dx + \int_0^1 x^5 e^{ax^6} dx$$

$$\int x^5 e^{ax^6} dx = \frac{1}{6a} \int e^{ax^6} d(ax^6) = \frac{1}{6a} e^{ax^6} + C$$

(Dabei ist die Substitution $t = ax^6$, $\frac{dt}{dx} = 6ax^5$, $\frac{dt}{6a} = x^5 dx$ ausgeführt:

$$\int x^5 e^{ax^6} dx = \int e^t \frac{dt}{6a} = \frac{1}{6a} \int e^t dt = \frac{1}{6a} e^t + C = \frac{1}{6a} e^{ax^6} + C.)$$

$$F = - \left[\frac{1}{6a} e^{ax^6} \right]_{-1}^0 + \left[\frac{1}{6a} e^{ax^6} \right]_0^1 = -\frac{1}{6a} (1 - e^a) + \frac{1}{6a} (e^a - 1) = \underline{\underline{\frac{e^a - 1}{3a}}}$$
